Flybook

The office in your pocket..

The office in your pocket

Mobility redefined! Flybook is a go-anywhere, do-everything computer. It's as powerful as a desktop or a heavyweight laptop PC and as handy as a mobile phone. At a tiny 235 x 155 x 31mm, it's crammed with the latest multimedia and telecommunications technology. Flybook is the office in your pocket!

watch as Flybook turns into a Tablet PC

Wide Touch Screen Display

The display is a full 225mm. (8.9in) screen that you can rotate and close perfectly back onto its keyboard, transforming it into a Tablet PC. The screen's format is 16:9, with a resolution of 1024x600 pixels, thus very comfortable to look at. The touch-sensitive screen can be managed with a stylus pen - navigate and use commands with a tap of the stylus. You can write on the screen in smooth electronic ink and Flybook automatically converts your handwriting into text. So, as well as being a fully functioning computer, Flybook is as free and easy to use as a sheet of paper, letting you write, draw and make notes - whenever and wherever your thoughts take you.

Extremely Portable

Smaller and more compact than other notebooks and at just 1.2kg, Flybook has an exceptional performance capacity, as well as being extremely portable. In fact, its equipped with 512MB of RAM, 40GB of hard disk loaded with Microsoft Windows XP Home Edition® as a standard package. Its Transmeta Crusoe 1GHz processor can maintain a much lower temperature than an Intel or an AMD processor, assuring perfect system stability.

Great things in little bundles

Flybook is your ideal work or leisure travel companion due to its compactness and lightness. Whatever you want to do - create and share documents in Microsoft Office®, surf the internet, send and receive e-mails, write or receive text messages, make phone calls - all bundled up in one 1.2kg notebook that slips into your handbag or briefcase.
